Good Morning.

This file is a JS Object which represents timings of a shop:

As the final task, you are required to design a front-end for this keeping following things in mind:

1. Every day has thier own key, i.e. *monday*, *tuesday*, wednesday...
2. Each day has 2 keys: *shop* & *delivery*
 - a. each of which has an *availability* key as bool. It tells whether it's open or close for this particular state
 - b. if *availability* is true: you'll have a *timings* array.
 - c. *timings* array will have either 2 or 4 elements each of which will have:
 - d. *open* & *close* key which are obvious
3. You are required to show this timing to user.
4. User should be able to:
 - a. Change timing of any cell
 - b. Add or remove break
 - c. Don't worry about the delivery operations.
5. Upon user changing anything:
 - a. The object should update &
 - b. The changes should reflect to user front as well

If it's helpful, i'm attaching a screen-shot of our dashboard please.

If you have any doubts or confusion, please feel free to message me.

Take your time and don't get intimated with complexity.

Monday	10:00	14:00	18:00	22:00	- Break		<input checked="" type="checkbox"/>
<div>Delivery</div>						- Delivery	<input type="checkbox"/>
Tuesday	22:36	23:36			+ Break	+ Delivery	<input checked="" type="checkbox"/>
Wednesday	11:58	22:00			+ Break		<input checked="" type="checkbox"/>
<div>Delivery</div>						- Delivery	<input type="checkbox"/>
Thursday						+ Delivery	<input type="checkbox"/>
Friday	11:00	22:00			+ Break		<input checked="" type="checkbox"/>
<div>Delivery</div>	11:00	12:00	14:00	15:00	- Break	- Delivery	<input checked="" type="checkbox"/>
Saturday	13:00	22:00			+ Break	+ Delivery	<input checked="" type="checkbox"/>
Sunday	13:00	22:00			+ Break	+ Delivery	<input checked="" type="checkbox"/>
